SEPM LAB PRACTICAL 2

Project title: Student Attendance Management System

Functional Requirements

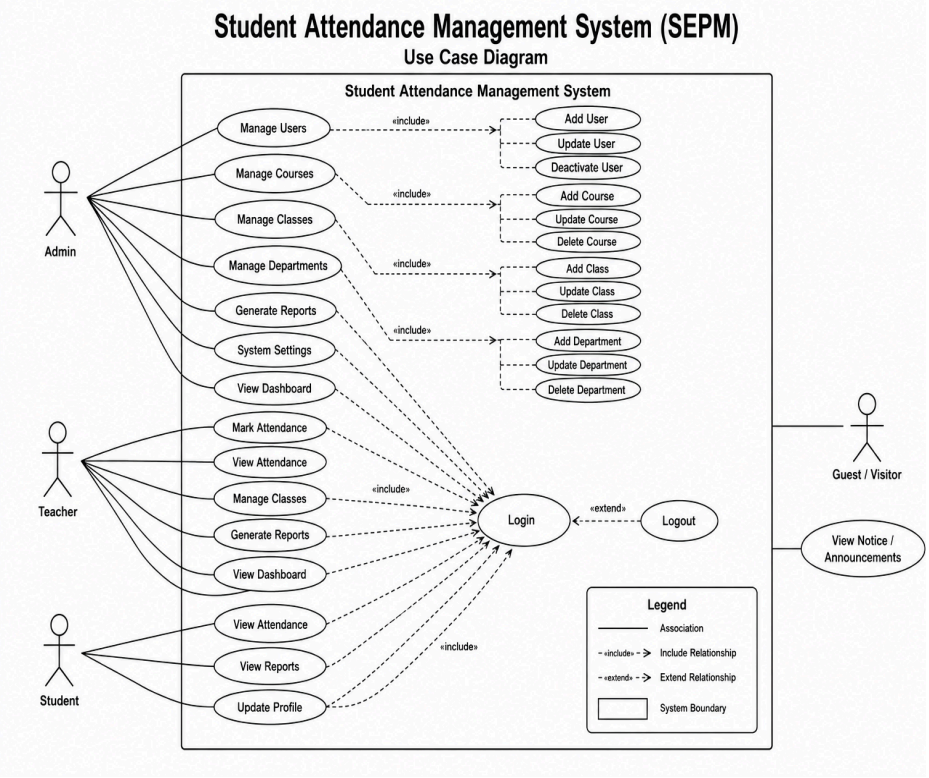

1. **User Login and Authentication**
    - The system shall allow Admin, Teacher, and Student to log in.
    - The system shall verify username and password.
    - The system shall provide logout functionality.
2. **User Management**
    - Admin can add, update, and deactivate users.
    - Admin can manage student and teacher accounts.
3. **Student Management**
    - Store student details such as ID, name, roll number, department, and semester.
    - Students can view and update their profile.
4. **Teacher Management**
    - Teachers can manage assigned classes.
    - Teachers can view student information.
5. **Attendance Management**
    - Teachers can mark student attendance.
    - Attendance can be recorded as Present, Absent, Late, or Excused.
    - Teachers can update attendance records.
    - Students can view their attendance.
6. **Course and Class Management**
    - Admin can add, update, and delete courses.
    - Admin/Teacher can manage classes and schedules.
7. **Reports**
    - Teachers and Admin can generate attendance reports.
    - Students can view their attendance reports.
    - Reports can be generated by student, class, course, or date.
8. **Dashboard**
    - Users can view information relevant to their role through a dashboard.
    -

9. **Notifications**
    - The system can display important notices and announcements.

Non-Functional Requirements

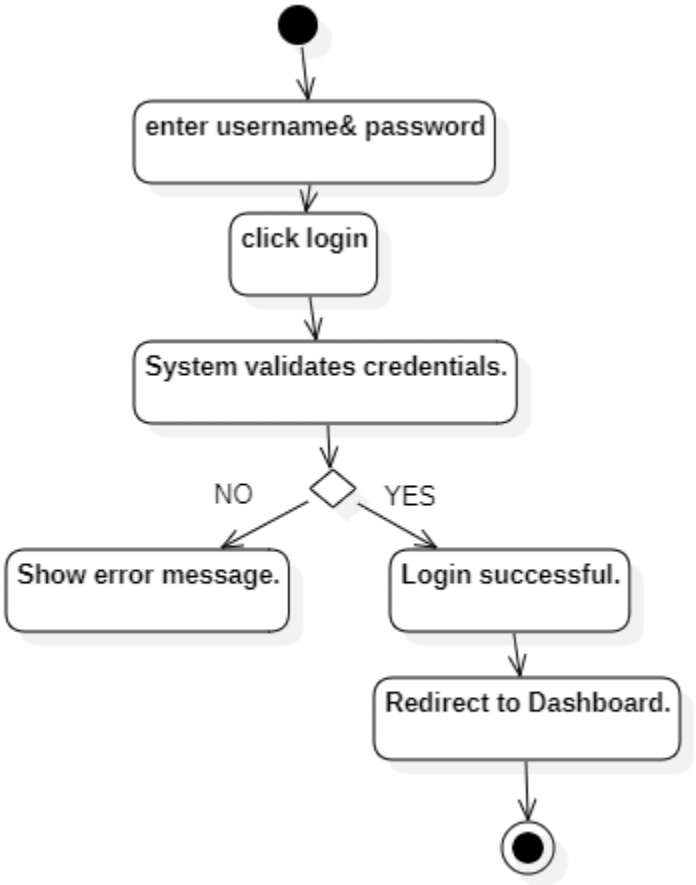

Requirement	Description
Performance	The system should respond to user requests quickly, preferably within a few seconds.
Security	User accounts and attendance records must be protected from unauthorized access.
Reliability	Attendance data should be stored accurately without unexpected loss.
Availability	The system should be available whenever users need to record or view attendance.
Usability	The interface should be simple and easy for students, teachers, and administrators to use.
Scalability	The system should support increasing numbers of students, teachers, courses, and attendance records.

Maintainability	The software should be easy to modify, debug, and update.
Compatibility	The system should work properly on common browsers and devices.
Data Integrity	Attendance records should remain accurate and consistent.
Backup & Recovery	Important attendance and user data should be regularly backed up and recoverable after failures
